

# PRAMLINTIDE: DRAWING UP THE RIGHT DOSE

The following table shows how to draw up the correct dose of pramlintide by converting micrograms ( $\mu\text{g}$ ) to units. It is usually best to draw up doses in a  $\frac{3}{10}$ -milliliter (30-unit) U-100 insulin syringe to get an accurate dose. Use only the dose prescribed by your physician.

DOSE IN MICROGRAMS ( $\mu\text{g}$ )	AMOUNT TO BE DRAWN UP IN U-100 INSULIN SYRINGE (UNITS)
15	2.5
30	5
45	7.5
60	10
120	20
